

Inbox Workflow Map

AI Inbox Triage for Trades

A simple lead triage workflow diagram.

Before sending

Replace placeholders, verify facts, keep approvals in writing, and avoid guaranteed revenue, ranking, retention, booking, or ad-performance claims.

Inbox Workflow Map

Route every inbound message through this approval-first flow.

Rule: AI may draft, but urgent/safety issues and all outbound messages require human approval.

Inbox Workflow Map

AI Inbox Triage for Trades

A simple lead triage workflow diagram.

Pack Snapshot

- Buyer: Trades businesses
- Category: AI Tool
- Startup cost: \$1-\$50
- Time to first sale: 2-4 weeks
- Difficulty: Medium
- Positioning hook: Plumbers do not need an AI agent. They need inbox triage.

Asset objective

- Trades businesses lose leads when messages sit unanswered or arrive without clear job details.
- Keep the promise concrete: Keep human approval in the loop.
- Use this asset to create a buyer-ready deliverable, not as a generic brainstorming note.

Core checklist

- Label inquiry type: emergency, quote, follow-up, complaint, supplier, admin.
- Extract minimum job details: location, issue, urgency, access, photos, preferred time.
- Draft reply only after classification and missing-info check.
- Route urgent jobs to phone-first workflow.
- Keep human approval before any message is sent.

Quality bar

- The asset should be specific enough that a buyer can approve it without a meeting.
- Every recommendation must be visible, actionable, and easy to explain.
- Remove anything that sounds impressive but does not change buyer behavior.

Delivery note

- Send the finished asset with a short summary of what changed.
- Include the next recommended step, the owner input needed, and the review deadline.
- Keep a copy of before/after evidence for renewals and follow-ups.

Workflow map

- Inbound message -> classify type -> check missing details -> urgency route.
- Emergency -> phone-first instruction -> human dispatch decision.
- Quote -> gather suburb/photos/access/timing -> draft reply -> human approval.
- Complaint -> acknowledge -> escalate internally -> approved response only.
- Admin/supplier -> non-lead label -> route away from quote queue.

Triage rule examples

- Emergency: gas smell, active leak, electrical hazard, lockout, or no essential service.
- Quote: non-urgent job with photos, suburb, access, timing, and scope.
- Missing info: request details before booking or quoting.
- Complaint: acknowledge, do not debate, escalate to owner before reply.

Buyer-ready deliverable standard

- This asset is for trades businesses; remove generic language before sending it to a prospect or client.
- The finished version should name the buyer context, the visible problem, the exact output, and the next decision required.
- Use concrete operational language. Replace broad promises with observable improvements: clearer menu, faster reply, cleaner handoff, fewer repeat questions, better approval trail.
- Keep one owner-facing summary at the top and one implementation checklist at the end so the buyer can act without a second explanation.

Inputs to collect before delivery

- Business name, owner or approver, preferred contact channel, and deadline.
- Current source material: screenshots, URLs, exports, menus, customer messages, reviews, product pages, or public market data depending on the pack.
- Brand constraints: logo, tone, colors, prohibited claims, legal-sensitive statements, and examples they already like.
- Approval constraints: who signs off, what can be changed without approval, and what must stay untouched.
- Delivery format: editable working file, final PDF/export, implementation checklist, and optional follow-up message.

Evidence capture for renewal or case study

- Save the before state with dated screenshots or source files.
- Record the exact changes made and why they were prioritized.
- Track buyer response time, approval friction, and implementation date.
- Ask for permission before using any quote, logo, review, screenshot, market data, or client result in a portfolio.
- If the buyer does not approve public proof, keep an anonymized internal case note for improving future pitches.

Client handoff message

- Here is the finished inbox workflow map for [business]. I included the working file, final export, and the short checklist for approval.
- The items marked [APPROVAL NEEDED] are the only parts I would not publish/send until you confirm them.
- My recommended next step is [specific next action]. If you want me to handle that as well, I can package it as [starter/standard/retainer option].

Pricing and scope guardrails

- Starter scope: one focused deliverable, one input list, one approval round, final export.
- Standard scope: deeper audit, 2-3 deliverables, implementation notes, and two approval rounds.
- Retainer scope: recurring refresh, monthly report, or ongoing response/review workflow with a fixed cadence.
- Out of scope unless priced separately: photography, ad spend, legal review, complex integrations, custom software, printing, and guaranteed performance outcomes.

Final QA before sending

- All bracketed placeholders are replaced or intentionally marked for buyer approval.
- Every link, date, price, hour, policy, claim, and contact detail is checked against a source.
- The final file opens on another machine and the filename clearly identifies the buyer, asset, and date.
- The buyer can tell what to do next within the first 30 seconds of opening the asset.
- No income, ranking, revenue, health, legal, or advertising performance guarantee is implied.
