

Manual Validation Scorecard

Manual Workflow Concierge

Criteria for deciding whether to automate.

--	--	--

Before sending

Replace placeholders, verify facts, keep approvals in writing, and avoid guaranteed revenue, ranking, retention, booking, or ad-performance claims.

Manual Validation Scorecard

Score before automating. Do not automate weak demand.

Criterion	Weight	Score 1-5	Weighted
Pain frequency	20%		
Current cost of pain	20%		
Manual deliverability	20%		
Willingness to pay evidence	25%		
Repeatability	15%		
Total /25	100%		

Decision: below 18/25 = keep manual or stop. 18-21 = keep manual. 22+ after 3 paid deliveries = automate one step.

Manual Validation Scorecard

Manual Workflow Concierge

Criteria for deciding whether to automate.

Pack Snapshot

- Buyer: Niche B2B operators
- Category: AI Tool
- Startup cost: \$0
- Time to first sale: 2-4 weeks
- Difficulty: Hard
- Positioning hook: Do not build the AI app. Sell the manual workflow first.

Asset objective

- Manual delivery proves buyer demand and exposes the real automation requirements before software spend.
- Keep the promise concrete: This requires sales and niche discipline.
- Use this asset to create a buyer-ready deliverable, not as a generic brainstorming note.

Core checklist

- Score buyer pain based on current cost, frequency, and urgency.
- Score manual deliverability before considering software.
- Score willingness to pay from real conversations, not compliments.
- Score repeatability only after three delivered outcomes.
- Automate one repeated step at a time.

Quality bar

- The asset should be specific enough that a buyer can approve it without a meeting.
- Every recommendation must be visible, actionable, and easy to explain.
- Remove anything that sounds impressive but does not change buyer behavior.

Delivery note

- Send the finished asset with a short summary of what changed.
- Include the next recommended step, the owner input needed, and the review deadline.
- Keep a copy of before/after evidence for renewals and follow-ups.

Weighted scorecard

- Pain frequency: 1-5, weight 20%.
- Current cost of pain: 1-5, weight 20%.
- Manual deliverability: 1-5, weight 20%.
- Willingness to pay evidence: 1-5, weight 25%.
- Repeatability: 1-5, weight 15%.
- Do not automate below 18/25 or before three paid deliveries.

Decision examples

- 16/25: stop or reposition; the pain is not proven enough.
- 19/25: keep selling manually and improve delivery SOP.
- 22/25 with three paid deliveries: automate one repeated low-risk step.
- Do not automate unclear intake, subjective judgment, or high-risk customer communication first.

Buyer-ready deliverable standard

- This asset is for niche b2b operators; remove generic language before sending it to a prospect or client.
- The finished version should name the buyer context, the visible problem, the exact output, and the next decision required.
- Use concrete operational language. Replace broad promises with observable improvements: clearer menu, faster reply, cleaner handoff, fewer repeat questions, better approval trail.
- Keep one owner-facing summary at the top and one implementation checklist at the end so the buyer can act without a second explanation.

Inputs to collect before delivery

- Business name, owner or approver, preferred contact channel, and deadline.
- Current source material: screenshots, URLs, exports, menus, customer messages, reviews, product pages, or public market data depending on the pack.
- Brand constraints: logo, tone, colors, prohibited claims, legal-sensitive statements, and examples they already like.
- Approval constraints: who signs off, what can be changed without approval, and what must stay untouched.
- Delivery format: editable working file, final PDF/export, implementation checklist, and optional follow-up message.

Evidence capture for renewal or case study

- Save the before state with dated screenshots or source files.
- Record the exact changes made and why they were prioritized.
- Track buyer response time, approval friction, and implementation date.
- Ask for permission before using any quote, logo, review, screenshot, market data, or client result in a portfolio.
- If the buyer does not approve public proof, keep an anonymized internal case note for improving future pitches.

Client handoff message

- Here is the finished manual validation scorecard for [business]. I included the working file, final export, and the short checklist for approval.
- The items marked [APPROVAL NEEDED] are the only parts I would not publish/send until you confirm them.
- My recommended next step is [specific next action]. If you want me to handle that as

well, I can package it as [starter/standard/retainer option].

Pricing and scope guardrails

- Starter scope: one focused deliverable, one input list, one approval round, final export.
- Standard scope: deeper audit, 2-3 deliverables, implementation notes, and two approval rounds.
- Retainer scope: recurring refresh, monthly report, or ongoing response/review workflow with a fixed cadence.
- Out of scope unless priced separately: photography, ad spend, legal review, complex integrations, custom software, printing, and guaranteed performance outcomes.

Final QA before sending

- All bracketed placeholders are replaced or intentionally marked for buyer approval.
- Every link, date, price, hour, policy, claim, and contact detail is checked against a source.
- The final file opens on another machine and the filename clearly identifies the buyer, asset, and date.
- The buyer can tell what to do next within the first 30 seconds of opening the asset.
- No income, ranking, revenue, health, legal, or advertising performance guarantee is implied.
