

Testimonial Card Specs

Review Reply + Testimonial Clips

Formats for turning reviews into social proof graphics.

Before sending

Replace placeholders, verify facts, keep approvals in writing, and avoid guaranteed revenue, ranking, retention, booking, or ad-performance claims.

Testimonial Card Layout Specs

Use exact review language. One claim per card.

Safe margins: 90 px minimum. Quote length: square 26 words, story 34 words, banner 22 words.

Testimonial Card Specs

Review Reply + Testimonial Clips

Formats for turning reviews into social proof graphics.

Pack Snapshot

- Buyer: Local businesses
- Category: B2B Service
- Startup cost: \$1-\$50
- Time to first sale: 1-7 days
- Difficulty: Easy
- Positioning hook: Turn boring customer reviews into sales assets.

Asset objective

- Businesses collect trust signals but rarely package them into reusable marketing assets.
- Keep the promise concrete: Do not invent claims; only repackage real customer language.
- Use this asset to create a buyer-ready deliverable, not as a generic brainstorming note.

Core checklist

- Use only real review language; never invent claims.
- Choose one claim per graphic: speed, friendliness, quality, value, outcome.
- Pair quote with business proof: service type, suburb, or customer context.
- Export square, story, and website banner variants.
- Keep negative-review replies private unless the business approves public use.

Quality bar

- The asset should be specific enough that a buyer can approve it without a meeting.
- Every recommendation must be visible, actionable, and easy to explain.
- Remove anything that sounds impressive but does not change buyer behavior.

Delivery note

- Send the finished asset with a short summary of what changed.
- Include the next recommended step, the owner input needed, and the review deadline.
- Keep a copy of before/after evidence for renewals and follow-ups.

Design specs

- Square: 1080 x 1080 px, quote max 26 words, logo bottom right.
- Story: 1080 x 1920 px, quote max 34 words, large safe margins.
- Website banner: 1600 x 600 px, quote plus service/location context.
- Use one claim per card and keep original review language intact.

Card production system

- Create one master square card, one story card, and one website banner per approved

review.

- Use one quote, one proof context, and one business mark per card.
- Keep typography large enough for mobile feeds.
- File naming: review-source_claim-format_date.

Buyer-ready deliverable standard

- This asset is for local businesses; remove generic language before sending it to a prospect or client.
- The finished version should name the buyer context, the visible problem, the exact output, and the next decision required.
- Use concrete operational language. Replace broad promises with observable improvements: clearer menu, faster reply, cleaner handoff, fewer repeat questions, better approval trail.
- Keep one owner-facing summary at the top and one implementation checklist at the end so the buyer can act without a second explanation.

Inputs to collect before delivery

- Business name, owner or approver, preferred contact channel, and deadline.
- Current source material: screenshots, URLs, exports, menus, customer messages, reviews, product pages, or public market data depending on the pack.
- Brand constraints: logo, tone, colors, prohibited claims, legal-sensitive statements, and examples they already like.
- Approval constraints: who signs off, what can be changed without approval, and what must stay untouched.
- Delivery format: editable working file, final PDF/export, implementation checklist, and optional follow-up message.

Evidence capture for renewal or case study

- Save the before state with dated screenshots or source files.
- Record the exact changes made and why they were prioritized.
- Track buyer response time, approval friction, and implementation date.
- Ask for permission before using any quote, logo, review, screenshot, market data, or client result in a portfolio.
- If the buyer does not approve public proof, keep an anonymized internal case note for improving future pitches.

Client handoff message

- Here is the finished testimonial card specs for [business]. I included the working file, final export, and the short checklist for approval.
- The items marked [APPROVAL NEEDED] are the only parts I would not publish/send until you confirm them.
- My recommended next step is [specific next action]. If you want me to handle that as well, I can package it as [starter/standard/retainer option].

Pricing and scope guardrails

- Starter scope: one focused deliverable, one input list, one approval round, final export.
- Standard scope: deeper audit, 2-3 deliverables, implementation notes, and two approval rounds.
- Retainer scope: recurring refresh, monthly report, or ongoing response/review workflow with a fixed cadence.
- Out of scope unless priced separately: photography, ad spend, legal review, complex integrations, custom software, printing, and guaranteed performance outcomes.

Final QA before sending

- All bracketed placeholders are replaced or intentionally marked for buyer approval.
- Every link, date, price, hour, policy, claim, and contact detail is checked against a source.
- The final file opens on another machine and the filename clearly identifies the buyer, asset, and date.
- The buyer can tell what to do next within the first 30 seconds of opening the asset.
- No income, ranking, revenue, health, legal, or advertising performance guarantee is implied.
